Species Election

This application encompasses multiple species of the inventive subject matter. The present claims involve at least four different turbine power plant configurations shown respectively in Figure 17, Figure 18, Figure 19, and Figure 20. There are also three alternative diluents which may be used with at least some of these plants. The three diluents are: (1) water, (2) carbon dioxide, and (3) a mixture of water and carbon dioxide: see for example claims 3-5. Pursuant to 35 USC § 121, applicant is required for a complete response to elect a single disclosed species by selecting one of the four alternative power plant configurations, and by further selecting one of the three alternative diluents. The combination of the selected plant configuration and the selected diluent will constitute the elected species. Applicant is further required to list all claims readable on the elected species including any claims subsequently added (MPEP 809.02(a)).

None of the present claims appear to be generic to all possible species.

Applicant is additionally advised that a mere argument alleging that a generic claim exists or is allowable will not satisfy a species election requirement. For a complete response, applicant must elect a single species and list the claims readable on that species as set forth above. (In this instance, the undersigned was unable to make contact with applicant's attorney for the purposes of offering a telephone election.)
